## U.S. National Phase of PCT/GB2004/003825

## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (original) A method of controlling access to a communications resource in which the maximum capacity made available to each of a plurality of users bears an inverse relationship to the usage of the resource made by that user over a previous period, relative to the usage made by the other users.
  - 2. (original) A method according to claim 1, comprising the steps of
- measuring the usage of the resource made by each user over a predetermined period,
  - ranking the users according to the measured usage,
- restricting the availability of resource to each user by applying a restriction factor to each user according to that user's ranking.
- 3. (original) A method according to claim 2, in which the restriction factors allocated to adjacently ranked users differ by a ratio which is constant over all users.
- 4. (currently amended) A method according to claim 2 or claim 3, in which the restriction factor allocated to the user having made the least usage over the previous period is unity.
- 5. (original) Apparatus for controlling access to a communications resource having means for allocating capacity to each of a plurality of users in inverse relationship to the usage of the resource made by that user over a previous period, relative to the usage made by the other users.
- 6. (original) Apparatus according to claim 5, having measuring means for the usage of the resource made by each user over a predetermined period,

sorting means for ranking the users according to the measured usage

## SAFFRE

## U.S. National Phase of PCT/GB2004/003825

calculation means for calculating a restriction factor for each user according to that user's ranking

and access control means for making the resource available to each user to an extent determined by the restriction factor.

- 7. (currently amended) Apparatus according to claim 5 or claim 6, associated with a modern associated with a server controlling access to the internet.
- 8. (currently amended) Apparatus according to claim 5 or claim 6, associated with a switching system for controlling access to an internet service provider.
